

StableRise®

Available with SilverSan™
anti-bacterial tops

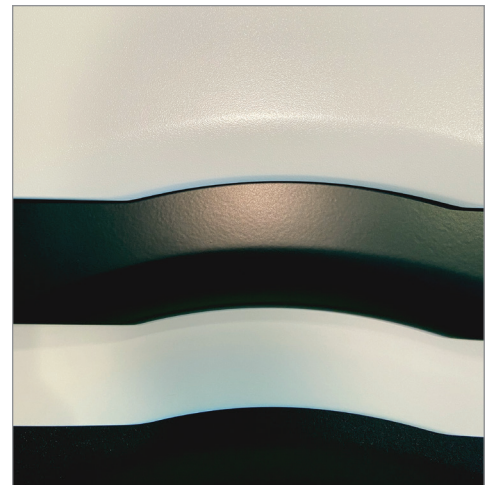

Our powder-coat-painted MDF (medium-density fiberboard) worksurfaces are infused with a silver-ion anti-bacterial treatment that slows the growth of bacteria, fungi and algae.

SILVERSAN coatings are specially formulated to slowly release silver ions which are known to inhibit the growth of microorganisms on powder-coated surfaces. These microbes are tiny living things that can only be seen with a microscope. While some microbes are important for human health, others can make us very sick.

Features and Benefits

- + Continues to inhibit microbes regardless of surface wear
- + Stable in high temperatures (tested up to 100°C)
- + Superior exterior durability
- + In-stock in Oyster White, custom colors available for large projects

Anti-bacterial test result from silversan

Bacteria	Start 0 hours	After 3 hours	After 6 hours	After 24 hours
Bacteria 1 <i>Escherichia coli</i> (NBRC 3972)				
Bacteria 2 <i>Staphylococcus Aureus</i> (NBRC 12732)
